We provide access database templates in Microsoft Access software application which can be used to manage multiple databases such as tables (numbers, text, or other variables), reports, forms, queries, macros (if any) and other various objects with specific connecting relationships based on user needs.

[Object-relational database - Wikipedia](#)

A relational database (RDB) is a collective set of multiple data sets organized by tables, records and columns. RDBs establish a well-defined relationship between database tables. Tables communicate and share information, which facilitates data searchability, organization and reporting.

[A Relational Model of Data for The relational view \(or ...](#)

Relational databases store data in a series of tables. Interconnections between the tables are specified as foreign keys. A foreign key is a unique reference from one row in a relational table to another row in a table, which can be the same table but is most commonly a different table. Databases storage implementations vary in complexity.
